

AI Code Review & Security Analysis Report

Professional Code Quality & Security Assessment

Generated: 2026-09-19 16:16 UTC | Language: java | Model: llama-3.3-70b-versatile

Executive Summary

Code Health Score	Risk Score	Total Findings
0/100	28	8

Merge Readiness: **unknown**

PR summary generation was skipped due to a Groq API error.

Severity Breakdown

Critical	High	Medium	Low
4	4	0	0

Detailed Findings

Type	Severity	Line	Message	Recommendation
1. Hardcoded Secret	● High	3	String password = "admin123";	Load secrets from environment variables or a secure vault.
2. Hardcoded Secret	● High	4	String api_key = "ABC-123-SECRET";	Load secrets from environment variables or a secure vault.
3. SQL Injection	● Critical	5	String query = "SELECT * FROM " + table + " WHERE name = " + name + "";	Use prepared statements and parameter binding.
4. Command Injection	● Critical	7	Runtime.getRuntime().exec("cmd /c dir " + name);	Avoid shell execution with user-controlled input.
5. Hardcoded Password	● High	3	String password = "admin123";	Store passwords in environment variables.
6. Hardcoded API Key	● High	4	String api_key = "ABC-123-SECRET";	Store secrets securely.

Type	Severity	Line	Message	Recommendation
7. Dangerous Dynamic Execution	● Critical	7	Runtime.getRuntime().exec("cmd /c dir " + name);	Avoid dynamic code execution.
8. Groq Review Error	● Critical	None	Groq review request failed: 404 Client Error: Not Found for url: https://api.groq.com/openai/v1/chat/completions	Set a valid GROQ_API_KEY and verify Groq API connectivity.

■ Key Recommendations

- 1. Address all Critical and High severity findings before merging.
- 2. Run additional security scanning tools to complement this analysis.
- 3. Consider implementing automated testing to catch similar issues in the future.

■ Code Quality Metrics

Overall Health Score: 0/100

Risk Level: Unknown

Maintainability: N/A

Security Score: N/A

■ Source Code Snapshot

```
public class VulnerableSecurity {  
    public void runQuery(String name, String table) {  
        String password = "admin123";  
        String api_key = "ABC-123-SECRET";  
        String query = "SELECT * FROM " + table + " WHERE name = '" + name + "'";  
        System.out.println(query + password + api_key);  
        Runtime.getRuntime().exec("cmd /c dir " + name);  
    }  
}
```
